

# SafeVite

A once-a-day multivitamin supporting wellness  
for those living with or surviving cancer.

**ONCOLOGIST  
APPROVED**

Developed by oncologists and oncology pharmacists to provide recommended vitamins while avoiding ingredients that can interfere with cancer treatments.

Feel better and do better.

An **appropriate** multivitamin specifically designed for cancer patients during and after treatment.

Cancer patients often take supplements unaware of the risks and possible negative outcomes. SafeVite addresses these concerns.

Take SafeVite with confidence, a **trusted multivitamin**.

For people with cancer: We **strongly recommend** sharing this information with your oncologist and oncology care team members.

# SafeVite

Information on vitamins and supplements is overwhelming...  
What is helpful to take? What should be avoided?

## Why choose SafeVite?

- Supports wellness during and after cancer treatment
- Provides appropriate vitamins specific for cancer patients
- Avoids potentially harmful vitamins
- Minimizes interference with cancer treatments
- Formulated to help with side effects
- Designed by cancer doctors & pharmacists
- Backed by science & research

## Who should take SafeVite?

Any person diagnosed with cancer during or after treatment.

## How long should I take SafeVite?

SafeVite recommends continuous use in order to maximize lifelong benefits.

## What is unique about SafeVite?

Using the most current references and studies, our research team has focused on vitamins that can be safely recommended for all cancer patients.

For Example:

- The US Preventative Services Task Force recommends against the use of Beta-Carotene or Vitamin E supplements for the prevention of cancer. SafeVite avoids these vitamins.
- Vitamin D deficiency is all too frequent and considered one of the most important vitamins in those diagnosed with cancer.
- Vitamin B6 (pyridoxine) deficiency can occur in cancer patients. B6 supports healthy nerves and can assist with relieving nausea.
- Vitamin B12 deficiency is frequent in cancer patients (specifically older individuals, those who are overweight, and those with diabetes).
- 3 out of 4 cancer patients at some point will have significantly elevated calcium. It is best to avoid calcium supplementation unless recommended by your doctor.
- Certain vitamins, like Vitamin C, have been shown to interfere with cancer treatment. SafeVite avoids these vitamins.

**4 Cancer Wellness**

**Our mission at 4CancerWellness is to help cancer patients feel better and do better.**
